

# NetApp BlueXP Classification Analysis and Management (NA- NBXCAM)

---

## Course Description

Learn how to use NetApp® BlueXP™ classification (powered by Cloud Data Sense) to classify and govern your data across your data estate. Explore the features and benefits of BlueXP classification and how it provides actionable insights into your data to address compliance requirements, detect security vulnerabilities, optimize costs, and accelerate cloud migration. Acquire the knowledge that you need to successfully use the data that is collected and classified. Gain the necessary skills to use BlueXP classification and its capabilities through reporting and Data Discovery Assessment.

Also learn about the BlueXP classification deployment best practices and troubleshooting (both BlueXP Connector and CDS Scanner). Finally, explore BlueXP classification use cases.

## Course Duration

2 days.

## Prerequisites

NetApp BlueXP Fundamentals

## Objectives

This course focuses on enabling you to do the following:

- Describe the challenge of understanding, governing, and securing enterprise data
- Identify the advantages of using NetApp BlueXP classification for your hybrid cloud
- Learn how to use BlueXP classification by interacting with the different dashboards and reports
- Manage and configure the tool by tailoring parameters to analyze and classify your data
- Define automated actions that help NetApp to sustain their security and compliance policies
- Explain the Data Discovery Assessment strategy, process, and deliverables with BlueXP classification
- Elaborate on the Data Discovery Assessment Reports that expand on the key indicators for governance, security, and compliance
- Demonstrate the deployment workflows for BlueXP classification
- Upgrade BlueXP classification service
- Identify the troubleshooting best practices for BlueXP classification

## Course Outlines

- Welcome
  - Welcome
- Introduction
  - The enterprise data challenge
  - Introduction to BlueXP classification
  - (Optional) Introduction to BlueXP
  - (Optional for partners) Qualification, pricing, and competition Troubleshooting multiple disk failures
  - Troubleshoot systems with multiple failed disks
- Management
  - Use classification (dashboards)
  - Manage classification Storage controller problems
- Data Discovery Assessment
  - Data Discovery Assessment introduction
- DDA Management Briefing Report
  - Customer Background
  - Executive Summary
  - Detailed Report Troubleshooting storage issues
- Implementation
  - Deploy in the cloud using BlueXP
  - Install on a host that has internet access
  - Install on a host with no internet access
  - After-installation tasks
- Troubleshooting
  - BlueXP or Connector troubleshooting
  - BlueXP classification scanner troubleshooting
  - Generic troubleshooting
  - Support and escalation

## Who Should Attend

- Engineers, architects, and administrators
